

Second example

In this activity we'll look at scientific notation.

Here are two basic problems dealing with scientific notation.

Example 1 (first example). *In this problem, a number in scientific notation is converted.*

Convert the following to a standard number:

Exercise 1 $1.22 \times 10^2 =$

Some exercises can have hints.

Exercise 2 *Given that 2.3×10^{-2} . Express your answer in decimal notation.*

Hint: Notice the (-) sign.

The value of 2.3×10^{-2} is .

Exercise 3 *Given that 4.6×10^1 . Express your answer in decimal notation.*

Hint: Think about the exponent.

The value of 4.6×10^1 is .

Learning outcomes: Understand a first example of the Ximera style. Have a nice basic example to work from.
